IMPLANT REPLACEMENT FOR SINGLE TEETH – THE "BASIC" SYSTEM

D2311 (60 MINUTES – CLASSIC DVD – 2CE)

The need for dental implants is enormous! Almost every adult has at least a missing tooth or two. The "BASIC" System is oriented toward general practitioners; providing a simple, easily understood, implant-placement procedure that does not require making a typical flap operation and a tomographic radiograph. Of course, other experience is gained, practitioners will also place multiple implants using the concepts demonstrated in this presentation. This video shows, step-by-step, the planning, placement, and restoration of a "BASIC" implant in the maxillary premolar area.

Gordon J. Christensen
